Our planet - the Earth ...

We live on the Earth. It is very, very big. It was a shape of a ball. It is turning all the time.

The Sun gives light and keeps the Earth warm. Without sunshine nothing can grow in the world. When the Sun shines it is day, when the Sun does not shine it is night.

We can see the Moon and the stars in the dark sky at night. They are in the sky all day, but because of the bright light of the Sun we can't see them in the day time. The Moon has no its own light. It reflects the light of the Sun. Stars look very small, but some of them are even bigger than the Sun. They look little because they are far away.

The Earth is full of wonders. Different animals live on the Earth. Different plants grow on it. There are a lot of forests and fields, hills and mountains on it.

There is a lot of water on the earth. It is in rivers, lakes, seas and oceans. Water is in trees, flowers, and in air. There is a lot of water in a man. Nothing can live without water.
